C-T Electric Truck

Two-ton capacity used by Charles & Co., New York, for their city deliveries.

Examine the C-T Truck at the Edison Electric Vehicle Show. See the Motor-and-Wheel Unit Drive which eliminates differential, transmission and universal joints; the simple, convenient control system and the extreme accessibility of all parts.

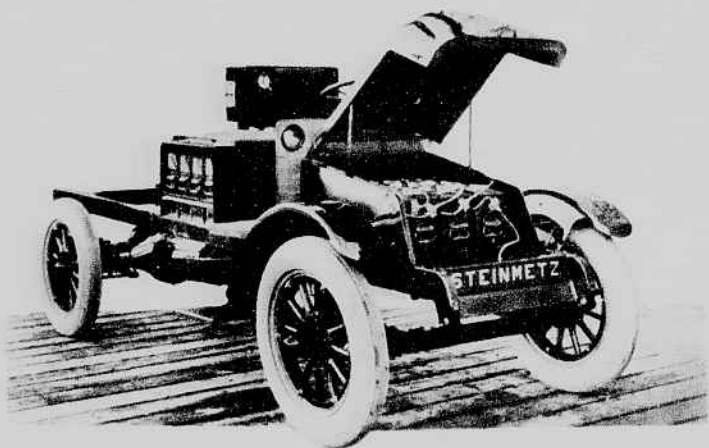

C-T Electrics are made in eight capacities from Bantam to five ton.

The Steinmetz Truck "Delivers the Goods"

There are four essentials in an Electrical Delivery Truck—electrical and mechanical efficiency, economy and reliability in operation. These are the distinguishing marks of the

Steinmetz Electrical Truck

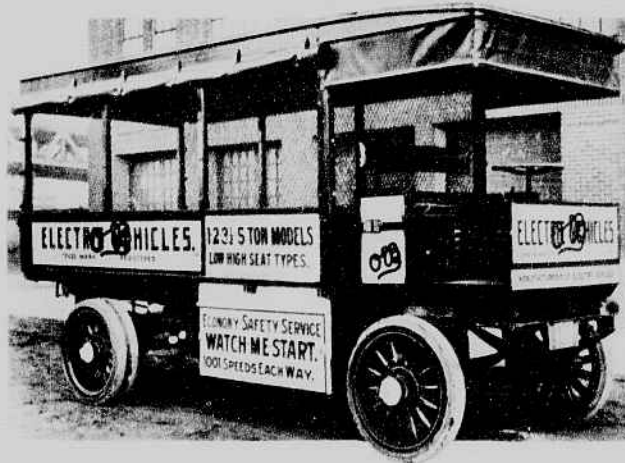

Deliveries with it cost less per mile than with any other truck. It has nearly a thousand less wearing parts than the gasoline type. For so powerful a truck the Steinmetz is very easy to drive, due to its simplicity of construction.

The placing of the battery, under the hood and seat, gives ideal weight distribution, high clearance and greater convenience. The Steinmetz lessens delivery charges and "delivers the goods."
